rayxc.com | linkedin.com/in/raymond-y-xu | github.com/ryx2

Summary

Machine learning engineer and Y Combinator S24 founder building AI products from model development to customer workflows. Experience in Google Assistant retrieval, document understanding, and AI agents for real estate.

Skills

Languages and infrastructure: Python, TypeScript, C++, SQL, Bash, Linux, PostgreSQL, Cloudflare Workers

Machine learning: TensorFlow, Keras, NLP, BERT, semantic retrieval, Stable Diffusion, LoRA

Applied AI: Large language models (LLMs), OpenAI, Anthropic, PydanticAI, Model Context Protocol (MCP)

Experience

RayXC | Founder

Jan 2026 - Present

- Built Talkshi, an agent marketplace with service discovery, provider matching, agent-written reviews, and payment integrations; implemented TypeScript APIs using Vercel, Cloudflare Workers, and PostgreSQL.
- Built Python and TypeScript SDKs for Raysurfer so AI agents could retrieve, reuse, and rate code from prior executions.
- Created Cliff for data-center siting research and prototyped Redliner for native Word tracked changes and comments.

Modern Realty (YC S24) | Co-Founder

Mar 2024 - Jan 2026

- Co-founded an AI home-buying company with over \$500,000 in total commission revenue and 19 homebuyers from approximately 350 leads (about 5% conversion); managed two employees.
- Built agents and tool-execution harnesses with OpenAI o1, Anthropic models, and PydanticAI for buyer communication, tour scheduling, and property research.
- Implemented database-backed agent memory, Python test-based evaluations, and human handoffs to realtors by text and email; handled approximately 10,000 outbound and 5,000 inbound texts through Twilio.

Entori.io | Founder

Jul 2023 - Mar 2024

- Built a GPT-4 email service that automatically summarized real-estate disclosure documents for home buyers.

Vana | Machine Learning Engineer

Apr 2023 - Jul 2023

- Prototyped generative AI products with Stable Diffusion and optimized LoRA training for personalized models.

Google | Machine Learning Software Engineer

Oct 2020 - Apr 2023

- Google Assistant (May 2022 - Apr 2023): Improved BERT embeddings for matching related voice queries on the NLP retrieval team; built experiment pipelines for new model features.
- Document AI, small model training team (Oct 2020 - May 2022): Improved document named entity recognition (NER) in low-data settings with fewer than 10 examples.
- Pretrained BiLSTM models with spatial invoice features and ran fine-tuning and tokenization experiments.

Johns Hopkins Applied Physics Laboratory | Machine Learning Engineer

Jul 2018 - May 2020

- Developed infrared detection, segmentation, and object-orientation models for UAV navigation using Python, C++, TensorFlow, and Keras.
- Led an internal research project on low-light underwater imaging and depth estimation.

Projects

pytest-depper | github.com/ryx2/pytest-depper

- Built a Python pytest plugin that uses Git changes and AST dependency analysis to select affected tests.

Education

Cornell University | Master of Engineering, Electrical and Computer Engineering | 2018

Cornell University | Bachelor of Science, Electrical and Computer Engineering | 2017

Y Combinator | Summer 2024 (S24) | Modern Realty
