San Francisco, CA | (607) 227-4935 | raymond.y.xu@gmail.com

Company website: rayxc.com | Blog: www.raymondxyu.com | linkedin.com/in/raymond-y-xu | github.com/ryx2

Machine learning engineer and Y Combinator S24 founder building AI products from model development to customer workflows. Experience in Google Assistant retrieval, document understanding, and AI agents for real estate.

Skills

Languages: Python, TypeScript, C++, SQL, Bash, Linux, PostgreSQL, Cloudflare Workers

Machine learning: Pytorch, TensorFlow, Keras, NLP, BERT, semantic retrieval, Stable Diffusion, LoRA

Applied AI: AI/LLMs, OpenAI, Anthropic, Open source models, PydanticAI, MCP, Harnesses, Tool calls, Model evaluation, Agentic memory, Prompting, Self improving agents

Experience

Founder

RayXC

Jan 2026 - Present

- Raised \$120,000 for RayXC. Hit 6k MRR with Raysurfer.com, an AI employee that got better as it learned about your customers with agentic memory and agentic voting based on customer interaction.
- Created Cliff for data-center land siting research, landed 1 pilot with a private equity firm
- Built Talkshi, an agent marketplace for business services, with service discovery, provider matching, agent-written reviews, and payment integrations; implemented TypeScript APIs using Vercel, Cloudflare Workers, and PostgreSQL.

Co-Founder

Modern Realty (YC S24)

Mar 2024 - Jan 2026

- Co-founded an AI home-buying company with over \$500,000 in total commission revenue and 19 homebuyers from approximately 350 leads. Raised \$1.3 million from Y Combinator, Pioneer Fund, and other angel investors.
- Managed two employees, one engineer and one designer.
- Built agents and tool-execution harnesses with OpenAI o1, Anthropic's sonnet 3.5 and sonnet 4, and PydanticAI typing for buyer communication, tour scheduling, and property research.
- Implemented database-backed agent memory, Python test-based evaluations, and human handoffs to realtors by text and email; handled approximately 20,000 outbound and 10,000 inbound texts through Twilio.
- Measured and improved client response rates by tweaking text messaging tone, messaging frequency, and messaging time of day through agentic cron job tuning

Founder

Entori.io

Jul 2023 - Mar 2024

- Built a GPT-4 email service that automatically summarized real-estate disclosure documents for home buyers.

Machine Learning Engineer

Vana

Apr 2023 - Jul 2023

- Prototyped and productionized Stable Diffusion LoRA training to create image models of users and their pets based on their uploads.

Machine Learning Software Engineer

Google

Oct 2020 - Apr 2023

- Google Assistant (May 2022 - Apr 2023): Improved BERT embeddings for matching related voice queries on the NLP retrieval team; built experiment pipelines for new model features.
- Document AI, small model training team (Oct 2020 - May 2022): Improved document named entity recognition (NER) in low-data settings with fewer than 10 examples.
- Pretrained BiLSTM models with spatial invoice features and ran fine-tuning and tokenization experiments.

Machine Learning Engineer

Johns Hopkins Applied Physics Laboratory

Jul 2018 - May 2020

- Wrote custom SSD CNNs infrared detection, segmentation, and object-orientation models for UAV navigation using Python, C++, TensorFlow, and Keras.
- Deployed onto a Nvidia Jetson Tx2.

Education

Cornell University | Master of Engineering, Electrical and Computer Engineering | 2018

Cornell University | Bachelor of Science, Electrical and Computer Engineering | 2017

Y Combinator | Summer 2024 (S24) | Modern Realty
