

Raymond Y. Xu

San Francisco, CA | (607) 227-4935 | raymond.y.xu@gmail.com

Company website: rayxc.com | Blog: www.raymondxyu.com | linkedin.com/in/raymond-y-xu | github.com/ryx2

Y Combinator S24 founder and former Google Machine learning engineer building AI products from model development to customer workflows. Experience in RAG, document understanding, AI agents for my AI native real estate brokerage.

Skills

Languages: Python, TypeScript, C++, Bash, Linux, PostgreSQL, Redis, Docker

Machine learning: PyTorch, TensorFlow, Keras, NLP, BERT, semantic retrieval, Stable Diffusion, LoRA

Applied AI: AI/LLMs, OpenAI, Anthropic, Gemini, Open source models, PydanticAI, MCP, Harnesses, Tool calls, Agent evaluation, Agentic memory, Prompting, Prompt caching, Self improving agents, Claude Code, Codex, LLM observability

Experience

Founder

RayXC

Jan 2026 - Present

- Built [Raysurfer](#) to improve AI agent execution for logistics and email workflows using persistent memory stored in PlanetScale; reached \$6,000 in peak MRR from two paying startup customers. Raised \$120,000 for RayXC.
- Created [Cliff](#) for data-center land siting research; secured a pilot with a private equity firm.
- Built [Talkshi](#), an agent marketplace for business services, with service discovery, provider matching, agent-written reviews, and payment integrations; implemented TypeScript APIs using Vercel, Cloudflare Workers, and PostgreSQL.

Co-Founder

[Modern Realty](#) (YC S24)

Mar 2024 - Jan 2026

- Co-founded an AI home-buying company with over \$550,000 in total commission revenue and 19 homebuyers from approximately 350 leads. Raised \$1.3 million from Y Combinator, Pioneer Fund, and other angel investors.
- Managed two employees, one engineer and one designer.
- Built agents for buyer communication, tour scheduling, and property research. Using OpenAI for texting, Anthropic for tool calls, Gemini for document summary, and PydanticAI for typing; reduced realtors' texting workload by automating digital communication.
- Implemented SQLModel-backed agent memory, LLM-as-judge evaluations, LLM observability with Logfire, and tool-execution harnesses, with human handoffs to realtors by text and email.
- Handled approximately 20,000 outbound and 10,000 inbound texts through Twilio; agentially tuned cron jobs for auto-improving message tone, frequency, and send times to improve client response rates.

Founder

Entori.io

Jul 2023 - Mar 2024

- Built a GPT-4 email service that automatically summarized real-estate disclosure documents for realtors; peaked at 60 weekly active users (WAU).

Machine Learning Engineer

Vana

Apr 2023 - Jul 2023

- Stable Diffusion LoRA training on user-uploaded images to create personalized images of users and their pets.

Machine Learning Software Engineer

Google

Oct 2020 - Apr 2023

- Google Assistant (May 2022 - Apr 2023): Developed and evaluated BERT embeddings for matching related voice queries on the NLP retrieval team; built experiment pipelines for new model features.
- Document AI at Google Cloud, small model training team (Oct 2020 - May 2022): Improved F1 scores by approximately 2 percentage points for key invoice fields; improved document NER in low-data settings with fewer than 10 examples.
- Pretrained BiLSTM models with spatial invoice features and ran fine-tuning and tokenization experiments.

Machine Learning Engineer

[Johns Hopkins Applied Physics Laboratory](#)

Jul 2018 - May 2020

- Built infrared object-detection, segmentation, and orientation models for UAV navigation using SSD CNNs, Python, C++, TensorFlow, and Keras; deployed on NVIDIA Jetson TX2.

Education

Cornell University | Master of Engineering, Electrical and Computer Engineering | 2018

Cornell University | Bachelor of Science, Electrical and Computer Engineering | 2017

Y Combinator | Summer 2024 (S24) | Modern Realty
